Elemental Analysis of Fossil Fuels and Related Materials

R.A. Kishore Nadkarni

About the Author

Dr. R.A. KISHORE NADKARNI received his Ph.D. in analytical chemistry at the University of Bombay. Since then he has worked as a research associate at the University of Kentucky, manager of the Materials Science Center Analytical Facility at Cornell University, and analytical leader in the ExxonMobil Company. In his last position he was responsible for technical quality management of the Paramins Division’s global plant laboratories.

He has authored more than 120 technical publications in the area of analytical chemistry and quality management. He is a member of the American Chemical Society and ASTM International. He is very active in ASTM and ISO in the petroleum products and lubricant field, holding the position of immediate past chairman of ISO/TC28, chairman of ASTM’s D02.03 on Elemental Analysis, vice-chairman of D02.92 on Proficiency Test Programs, D02.94 on Quality Assurance and Statistics.

Dr. Nadkarni has received the Award of Appreciation (1991) and Awards for Excellence (1998, 1999, and 2013) from ASTM’s D02 Committee for his contribution to the oil industry, the Award of Merit (2005) and the George Dyroff Award of honorary D02 membership (2006), and the Sydney Andrews D02 Scroll of Achievement Award (2006).

Foreword

THIS PUBLICATION, *Elemental Analysis of Fossil Fuels and Related Materials*, was sponsored by Committee D02 on Petroleum Products and Lubricants. This is Monograph 10 in ASTM International’s monograph series.
Acknowledgments

It has been said that “it takes a village to raise a child.” In my case it probably took several villages, many cities, two countries on two continents, and three universities to do the task. Only a few of the people I benefited from can be mentioned here because this is a technical treatise, not a memoir.

I want to gratefully thank the eminent teachers under whom I learned the art of analytical science. These include late Professor Barun Chandra Haldar of the (Royal) Institute of Science at Bombay University; Professor William D. Ehmann of the University of Kentucky; and late Professor George H. Morrison of Cornell University. I stand on the shoulders of these giants to peek at my little domain of minutia (Isaac Newton).

While at the above universities, my research work was supported over the years by the Council of Scientific and Industrial Research (India); the U.S. Fulbright Educational Foundation; the U.S. Department of Agriculture; the National Aeronautics and Space Administration; the National Science Foundation; and the U.S. Department of Energy. I am thankful to these federal government organizations for their financial support in the research and development of science.

I also have to thank my former employers who provided facilities and allowed me to pursue my research interests in analytical chemistry: Exxon Research and Engineering Company; Exxon Chemical Company–Paramins Manufacturing Technology Division; ExxonMobil Research and Engineering Company; and Infineum USA, LLC.

Additionally, I am indebted to the following colleagues in the above companies: Dr. Ricardo Bloch, Kevin Bly, Dr. Bob Botto, Dr. Jim Bover, Dr, Larry Engel, Dr. Mike Granchi, Dr. Richard Ledesma, Jack Mackey, Alan Malanowicz, Dr. David Martella, Dr. Frank McElroy, Dr. Elisa Santos, Dr. Catherine Schenck, Dr. Ralph Spohn, the late Rollie Williams, and Everett Wixom. I also thank the following colleagues from the oil industry involved in ASTM work: Dr. Don Becker of Amoco, John Crnko of ASI, Dr. Mike Pohl of Horiba Instruments, Dr. David Hwang of Chevron, and Bill Tanguay of Metrotech Systems. All of them helped me in this work and know far more about the subject than I do.

Special thanks are due to various ASTM staff members, principal among them David Bradley and Earl Sullivan, current and former staff managers of the D02 Committee on Petroleum Products and Lubricants; Kathy Dernoga, publications manager; and Anne McKlindon, former director, PTP Services. Special credit must be given to Rebecca Edwards
of Cenveo Publisher Services for her painstaking efforts in copyediting and proofreading the manuscript. The book would not be in the good shape it is in without her unfailing help in correcting syntax, spelling, references, and content throughout the publishing process.

I am, of course, eternally grateful to my beloved wife, Nancy Joanne, for her unfailing support while I was busy writing, teaching, traveling around the world, and in general having one hell of a good time while she took care of the home and our children. And regarding these children of ours who made it all worthwhile, what can I say? “Thanks for everything, Bobos! You are the greatest. I love you all beyond words.”
Contents

Foreword ...................................................... iii
Acknowledgments ............................................... v
Chapter 1—Introduction ......................................... 1
Chapter 2—Importance of Elemental Analysis of Fossil Fuels .............. 37
Chapter 3—Analytical Techniques for Elemental Analysis of Fossil Fuels . . . 61
Chapter 4—Basic Protocols of Elemental Analysis ......................... 163
Chapter 5—Elemental Analysis of Coal, Coke, and Fly Ash ..................... 248
Chapter 6—Elemental Analysis of Oil Shales ................................ 395
Chapter 7—Elemental Analysis of Crude Oils ................................ 457
Chapter 8—Elemental Analysis of Gasoline and Diesel ......................... 509
Chapter 9—Elemental Analysis of Lubricants and Additives ..................... 582
Chapter 10—Elemental Analysis of Lubricating Greases ....................... 673
Chapter 11—Elemental Analysis of Other Petroleum Products ................. 683
Chapter 12—Elemental Analysis of Process Catalysts ......................... 700
Chapter 13—Elemental Analysis of Gaseous Fuels ............................ 709
Chapter 14—Elemental Analysis of Biofuels .................................... 733
Chapter 15—Proficiency Testing Programs for Elemental Analysis of Fuels and Lubricants ......................................................... 776
Appendix 1—ASTM Standards for Elemental Analysis of Coal and Coke . 799
Appendix 2—ASTM Standards for Elemental Analysis of Petroleum Products and Lubricants ......................................................... 802
Appendix 3—ASTM Standards for Elemental Analysis of Gaseous Fuels . 809
Appendix 4—ASTM Research Reports for the Elemental Analysis of Coal and Coke ................................................................. 811
Appendix 5—ASTM Research Reports for Catalyst Analysis .................... 812
Appendix 6—ASTM Research Reports for the Elemental Analysis of Petroleum Products and Lubricants ......................................................... 813
Appendix 7—Practical Hints for Test Method Operation ....................... 816
Index ..................................................................... 849
Elemental Analysis of Fossil Fuels and Related Materials
